S2 Version/rev2

Important Note

Engine Immobilizer--- The Sunspeed wiring kit eliminates the Lotus Elise fuel shut-off, inertia switch and immobilizer. If the Honda Engine Management Computer (ECU) has an immobilizer it is necessary to reflash the program to eliminate the immobilizer. Or use an aftermarket user programmable ECU without immobilizer

Our experience has shown us that the Honda Japan Spec. ECU does not have an immobilizer. The US and UK ECU's have an immobilizer.

For any inquiries or questions regarding this kit please contact your dealer, distributor or send e-mail to sir@sunspeed.com
